About the Author

JAMES W. HALL • B.S. and M.A. in mathematics from Eastern Illinois University and Ed.D. from

Oklahoma State University • 35 years teaching college mathematics with 31 years in the community college system

- Chair of the Mathematics Department at Parkland College in Champaign, Illinois, for 7 years
- Author of 19 mathematics books in developmental education
- Member of AMATYC (American Mathematical Association for Two-Year Colleges) for 34 years, Midwest Regional Vice President 1987–1989, chair of the editorial review committee 1991–1995, and writing team chair for Chapter 6 on Curriculum and Program Development of Beyond Crossroads.
- President of IMACC (Illinois Mathematics Association of Community Colleges) 1995–1996
- My wife and I enjoy traveling and seeing the wonders of the world, both natural and man-made.

I can say without a doubt that I was made to be in a classroom. I followed the footsteps of my father, a 35-year middle school math teaching veteran, into this challenging yet rewarding career. My college experience began as a community college student at Lakeland College in Mattoon, Illinois. From there, I received a Bachelor of Science in Mathematics from Eastern Illinois University and a Master of Science in Mathematics from Southern Illinois University. I accepted a tenure-track faculty position at Parkland College, where I have taught developmental and college-level courses for 15 years. I had the opportunity to begin writing textbooks shortly after I started teaching at Parkland. My then department chair and mentor, James W. Hall, and I co-authored several textbooks in Beginning and Intermediate Algebra. In the fall of 2011, our

department began discussing the idea of creating two tracks through our beginning and intermediate algebra courses. The idea stemmed from two issues. First, most of our beginning and intermediate algebra students were headed to either our Liberal Arts Math or our Introduction to Statistics course. Second, we wanted to beef up intermediate algebra to better prepare those students who were headed to college algebra. These were two competing ideas! Increasing the algebraic rigor of these courses seemed to “punish” students who were not heading to college algebra. With the two track system, we implemented a solution that best serves both groups of students. I have to admit that I was initially concerned that offering an alternate path through developmental mathematics for students not planning to take college algebra would lead to a lowering of standards. However, my participation in our committee investigating this idea led me to believe it was possible to offer a rigorous course that was exceedingly more appropriate for this group of students. Since there were no materials for the course, I began creating my own and was paired by McGraw Hill with Dave Sobecki. Together, we have created the material that I have been using for class testing. After a semester and a half of piloting these materials and seeing the level of enthusiasm and engagement in the mathematical conversations of my students, I am now convinced that this is an ideal course to refine and offer. As a trusted colleague told me, “this is just a long overdue idea.” Outside of the classroom and away from the computer, I am kept educated, entertained and ever-busy my wonderful wife, Nikki, and our two children, Charlotte, 6 and Jake, 5. I am an avid St. Louis Cardinals fan and enjoy playing recreational softball and golf in the summertime with colleagues and friends.

BEGINNING AND INTERMEDIATE ALGEBRA: THE LANGUAGE & SYMBOLISM OF MATHEMATICS BY JAMES HALL, BRIAN MERCER PDF

Beginning and Intermediate Algebra: The Language and Symbolism of Mathematics emphasizes what great mathematicians had identified for generations - mathematics is everywhere! Authors James Hall and Brian Mercer believe active student involvement remains the key to learning algebra. Topics in the text are organized by using the principles of the AMATYC standards as a guide, giving strong support to teachers using the text. The book's organization and pedagogy are designed to work for students with a variety of learning styles and for teachers with varied experiences and backgrounds. The inclusion of the "rule of four" or multiple perspectives -- verbal, numerical, algebraic, and graphical -- has proven popular with a broad cross section of students.

A key supplement for the text are the Lecture Guides. This supplement by the authors, with the assistance of Kelly Bails of Parkland College, provides instructors with the framework of day-by-day class activities for each section in the book. Each lecture guide can help instructors make more efficient use of class time and can help keep students focused on active learning. Students who use the lecture guides have the framework of well-organized notes that can be completed with the instructor in class.

When I rented it they said I would have it until December 6 (the end of the school semester) then they sent me an email on Nov. 6 telling that my last day to have the book was Nov 7 and wanted me to pay more money to extend the rental. This is a scam and a rip off. They know that you will need it until the end of the semester and advertise that you will have it until the end of the semester then half way through the take it away and hit you up for more money. Don't ever rent school books from them.

It is a nice book helped for my class

By olabanji faidat

It is a nice book helped for my class, but I wished the chapter 12 was in the book instead of the online source.
