Screed distracts from otherwise useful perspectives ...

By Ken in Denver

This book is Dedicated on its initial page and then Preface to a rebuke of "an anonymous reviewer" whose critique of his journal article and his book on the best way to explain Entropy the author didn't like. Unfortunately, it continues as a screed against that reviewer and all others who disagree with his approach, with snarky asides throughout that get really, really tiring. I find it odd that no reviewer here to date other than Braithwaite mentions this off-putting weakness in presenting otherwise useful perspectives. About a quarter way through, you want to scream "Just Get Over It!" and throw the book away (I almost did), but if you can tolerate the pissing-contest remarks and make it past that point, he winds down the language on how stupid everyone is who disagrees with him, and his interpretations on Entropy are worthwhile food for thought, whether you agree with him or feel they are conclusive or not.

Very interesting approach to entropy with an analysis and conclusion ...

By bob schafer

Very interesting approach to entropy with an analysis and conclusion I have never seen before. I am not on the level to really evaluate what he says but his analysis was novel and convincing to the degree I followed it.

I think those interested in the subject this book is a must.

Entropy made exciting!

By Michael F Rainbolt

I'm a 60 year old engineer who has been on a quest to learn more about physics, science and new theories that have evolved since I left college. One of my targets was revisiting the laws of thermodynamics. Professor Ben-Naim's book did not disappoint! I was intrigued with the connection of entropy to probability and uncertainty. This book is well written and a thorough explanation of the Second Law of Thermodynamics and the entropy of closed systems. I highly recommend reading this book, it was entertaining as well as enlightening. I totally enjoyed the histories and references. Great value and I purchased and read more of his books with more to follow.
